Technical Test

Name: R. Santhosh Kumar
Python Full stack
Date: 07/03/2026

1. Python is a high-level interpreted programming language that is easy to learn and used for web development, AI etc.

Data types:

output

i) string = name = "santhosh"
city = 'chennai'
print (name)
print (city)

santhosh
chennai

ii) Int = a = 10
Float = b = 3.5
print (a)
print (b)

10
3.5

iii) Tuple = numbers = (10, 20, 30)
print(numbers)
print (numbers [1])

(10, 20, 30)
20

iv) Boolean = True or False

2. i) Input Function (Input()) :

The input() function is used to take input from the user through the keyboard.

Ex: name = input("Enter your name")
print (name)

output: Enter your name : farthosh
farthosh

ii) output function (print()) :

The print () function is used to display output on the screen

EX: Print ("Hello world")
output: Hello world

3. An operator is a symbol used to perform operations on variables and values. operator helps calculation, comparisons etc.

Types:

i) Arithmetic - +, -, *, /, %, **, //

ii) Assignment - =, +=, -=, *=, /=

iii) comparison - =, !=, >, <, >=, <=

iv) Logical - and, or, not

v) membership - in, not in

4.

```
*
* *
* * *
```

```
i = 1
while i <= 3:
    j = 1
    while j <= i:
        print ("*", end = " ")
        j += 1
    print ("\n")
    i += 1
```

5.

```
J
KL
MNO
```

```
letters = "JKLMNO"
K = 0
for i in range (1,4):
    for j in range (i+1):
        print (letters [K], end = " ")
        K += 1
    print ()
```
