Name: R. Santhosh Kumar

Batch: SCAKKN - PyFSBE

Date: 14/03/2026

Timing: 9:30AM To 11:30AM

PH.No: 9444601370

1. i) Decision making statements allow a program to choose different actions based on conditions.

ii)
```
Marks = int (input ("Enter the mark"))

If marks >= 100:
    print ("distinction")

elif marks >= 80:
    print ("1ST class")

elif marks >= 70:
    print (2nd class)

else:
    print ("Fail")
```

2. i) Looping statement is used to repeat a block of code multiple times until a condition becomes false.

ii) For Loop:

```
For i in range (1, 4):
    print (i)
```

iii) while Loop:

```
n = 1
while n <= 3:
    print(n)
    n += 1
```

3.

```
class student:

    def __init__ (self, name, age):
        self.name = name
        self.age = age

    def display (self):
        print ("name": , self.name)
        print ("Age": , self.age)

S1 = student ("SK", 23)

S1.display()
```

4.

```
class person:
    def name(self):
        print("Name: santhosh")

class Employee(person):
    def Job(self):
        print("Job: Developer")

class manager(employee):
    def department(self):
        print("Department: IT")

obj = manager()
obj.name()
obj.Job()
obj.department()
```

5. i) A construction is a special method __init__().

ii) It runs automatically when an object is created and is used to initialize values.

iii)

```
class student:
    def __init__(self, name, age):
        self.name = name
        self.age = age
```

```
def show(self):
    print(self.name, self.age)

s1 = student("Santosh", 23)
s1.show()
```
